

Copyright information for data sets COSMO-REA6 and -REA2

The reanalysis data sets COSMO-REA6 and COSMO-REA2 generated in the framework of the Hans-Ertel-Centre for Weather Research – Climate Monitoring and Diagnostics at the Universities Bonn and Cologne are protected by copyright.

The data sets can be used **without restriction when providing references to the source** following the "Federal regulation for the determination of the terms of use in relation to the provision of geographical data (GeoNutzV)".

Binding design notes (following §3 of GeoNutzV) for the mandatory references:

- When data sets are used without modification, the mandatory reference is "Source: Hans-Ertel-Centre for Weather Research". In this case, the mandatory reference can be replaced by the use of the HErZ logo (see below).
- When data sets are used with modification, editing, new arrangements or other alterations, the mandatory reference should reflect the extent of these modifications, e.g., "Data basis: Hans-Ertel-Centre for Weather Research, values altered".

The following templates should guide the user in visualizing the reference and – if desired – in using a link to the HErZ Climate Monitoring and Diagnostics website (<https://www.herz-tb4.uni-bonn.de>):

1. HErZ logo including logotype

2. Copyright: © Hans-Ertel-Centre for Weather Research
3. Quelle: Hans-Ertel-Centre for Weather Research

Further copyright remarks – when stated in the data set description – have to be followed.

Further information on the data sets as well as the legally binding German version of this document can be found on the website of HErZ Climate Monitoring and Diagnostics <https://www.herz-tb4.uni-bonn.de> as well as the COSMO reanalyses website <http://reanalysis.meteo.uni-bonn.de>.
